

STRUCTURAL COMPETENCE

Individual Component Checklist

ENGLISH VERSION

INTRODUCTION

This checklist has been designed for use as a practical tool for describing **ONE VERSION** of a particular component of a language test, for the purpose of evaluation or comparison. This checklist is for use only with tests of structural competence, the skills which are sometimes tested under names such as ‘grammar and usage’ or ‘language in use’.

General Notes

In this checklist the following terminology is used:

- **Component**
One subtest in an examination. Usually an examination is made up of subtests in the different skills, and components are commonly called by the names of skills. This checklist concerns the listening component of an examination. Components are also often referred to as ‘papers’.
- **Input**
The material provided by the candidate for use in order to produce an appropriate response. In a test of listening it is likely to take the form of a recorded oral text plus written items.
- **Item**
Each testing point which is given a separate mark or marks. It may consist of, for example, one gap in a written text, or one multiple choice question with three or four options.
- **Response**
The candidate’s written or spoken response to a task. The term ‘answer’ is often used in this context. However, for reasons of precision, it is not used here.
- **Rubric**
The instructions given to a candidate on how to respond to a particular input. An example, for a multiple choice cloze test, might be: *Here are some sentences about a visit to a restaurant. Finish the second sentence so that it has the same meaning as the first.*

- **Section**
Parts of the component can be subdivided into. Each may be testing a different area of skill or usage.
- **Task**
A task is defined precisely as a combination of rubric, input and response. For example, a reading text with several multiple choice items, all of which can be answered by referring to a single rubric, can be classified as a task. If another set of items relates to the same text, but requires a different rubric in order for a response to be produced, then that combination of text, rubric and items constitutes a different task. Thus the same text can form part of the same input for one or more tasks.

The term ‘question’ which is often used when referring to tasks, whether or not they are presented as grammatical questions, is avoided here because of its ambiguity.

- **Text**
In the context of a reading component of an examination, a text is a piece of written language, used as input to a task.

Please note

Some of the questions in this checklist are to be answered with a couple of words or numbers, and some have boxes to tick ‘yes’ or ‘no’. Others, which involve making some qualitative judgement, ask for an assessment on a scale of 1 – 4, where 1 represents the most negative judgement and 4 the most positive.

Instructions for Individual Questions

A GENERAL DESCRIPTION

11 Weighting

Sometimes one section of a component is given more or less importance than others by weighting it differently from the others – assigning a higher or lower percentage of the total mark to it.

B PRESENTATION AND LAYOUT

7 How realistic is the presentation of the text?

If, for example, a task used in an examination paper is taken from an original magazine or newspaper article, an attempt may be made to present it in such a way as to make this source clear to the candidate, by means of headlines, setting out the text in columns etc.

D TEXTS AND TASKS

1 INPUT

Most of this part of the checklist operates at the level of texts. As the number of texts in a test varies widely – some being composed of as few as two or three, while others consist of a large number of very short texts – text numbers have been left out of headings, and it is assumed that these pages will be photocopied when necessary, and text numbers written in.

3 Type of text

Texts for use in tests of reading are often taken from sources such as newspapers, magazines and novels. These are often adapted. In this question **box 1 = an unadapted text; box 2 = an adapted text; box 3 = specially written for the test.**

4 Writer's overall intention

It is often the case that there may be several intentions associated with any text. However, an *overall* intention should be identified.

5 Target reader (of original text)

It would, of course, be possible to break this down much further, but for the purposes of this checklist it has been decided to give only these limited categories, with the possibility of specifying more accurately under category d).

6 Topic of the text

The likely extent of the topic areas used in tests of listening is covered by the 'notions' in **Threshold Level 1990**.

2 LANGUAGE ABILITY TESTED

1 Main focus of testing

By this it is meant the **main focus** of what is being tested in language terms, although it may also touch on other areas. It is also taken as understood that there is a great deal of ambiguity in this area. This area of the checklist operates at item level. Again, it is assumed that this page will be photocopied and the text and item numbers written in.

This area of the checklist operates at a task and item level. Again, it is assumed that this page will be photocopied and test and item numbers written in.

3 EXPECTED RESPONSE

6 To what extent are non-linguistic skills being tested?

This question attempts to gauge the extent to which skills other than language ability are required in order to provide a response. An example of this would be an item which demands some type of mathematical calculation in order to get the correct answer, or an item which involves the candidate reading a map or interpreting a plan or diagram.

12 To what extent is there an overlap with testing another area of linguistic skill?

This question attempts to gauge the extent to which testing one area of language skill also involves the candidate's ability in another area of skill. It is difficult to separate the skills completely from one another. For example, it is likely that any test of listening will also involve candidate reading instruction and rubrics, and in writing responses, and tests of structural competence and reading will also involve candidates in writing.

4 MARKING

5 What type of marking is used?

These can be characterised as follows:

a) Examiner marking: marking carried out by experts, who are often referred to as examiners. They are required to make use of professional judgement in awarding marks.

b) Clerical marking: marking carried out by non-experts, who have to deal with letters, numbers or words. They are generally required to exercise only very limited judgement, of a non-expert type.

c) Computerised marking: marking carried out by a machine such as an optical mark reader. Multiple choice tests are often marked in this way.

The term 'marking' as it is used here refers to the process of assigning a mark to an item, and not to the way in which the mark is recorded or read. Computerised marking mean that the candidate's response goes directly to the computer for the mark to be assigned, and no human marker is involved.
